

# Mold Growers Coalition

Each delineated region must be either shaded entirely black or left entirely white. Numbers indicate how many squares orthogonally adjacent to the numbered square are to be shaded black.

All the black squares must be in one contiguous group with no loops. That is, given any two black squares, there must be only one way to get from one to the other using only orthogonal movement on black squares. For example, a 2x2 group of black squares is not allowed.
